

Service Bulletin

Straight Knife Machine - Wicking Kit

Due to environmental conditions the oil flow rate through the gravity feed oiling system can vary from application to application and work environment. We are therefore enclosing a wicking kit in the supply box of your new Eastman Straight Knife machine.

Installation of this kit is recommended **only** when temperatures are excessive and oil flow rate is exceptionally high. Under these conditions, the flow rate may be decreased by proper installation of the wicking kit provided. **Please do not install the kit unless these environmental conditions exist and oil flow rate is excessive. Installation in environments with low ambient temperatures or when the oil flow rate is not excessive may result in premature wear or machine failure due to inadequate lubrication.**

The use of sewing machine oil or lubricants other than those specified in the enclosed instruction manual may further degrade the performance of your new Eastman Straight Knife machine. Please read the instruction manual and follow the recommended lubrication schedule. The use of high quality Eastman lubricants will help insure superior performance for the life of your Eastman product.
